From [REDACTED]

In your next pouch report please include a list of classified documents at your location that have been received from this company.

Your recommendations thus far on the FAK list have been accepted and incorporated into a new list. The MP number for the jam roller solenoid on the recorder is MP-10600.

Please check carefully with the security officer of your detachment regarding what you may say about your location and travels in your personal letters. There is common talk around the plant regarding locations. This information originated from personal letters. At the time I was overseas, this information was a border-line case and although not a strict security violation, the detachment security officer desired that such information be withheld. May I remind you that one of our group lost his security clearance, and I intend to be rigid in my expectations regarding your security habits and severe in dealing with any violations.

I am including two engineering change requests for the System 3 equipment. In one of these you will require a modification kit that is not presently available. The change requests are for your information. Modification kits for the high-speed dubbing application will be available shortly.
